## CASE STUDY

## Country specific DSUR

| The Challenge | Pharmaceutical major that offers a wide range of therapeutics, including innovative products for Oncology, Immuno-therapeutics, mental health, Infectious disorders, and Vaccines.              |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | Requested to prepare a DSUR for single country.                                                                                                                                                 |
|               | In Korea, the Ministry of Food and Drug Safety (MFDS) requires a DSUR via an<br>Investigator in the E2F style. Specific guideline mandates limited scope document<br>compared to global report. |
|               |                                                                                                                                                                                                 |
| SIRO Solution | SIRO proposed to create the Executive Summary of the DSUR without any line listings to follow the requirements in Korea while eliminating chances of unblinded of the investigators.            |
|               | Additionally, prepared a cover letter where the provision to provide the line listings in an unblinded manner was included based upon requests.                                                 |
|               |                                                                                                                                                                                                 |
| Key Takeaways | SIRO team provided customised solution to meet the regional requirement while maintaining the blinding as per global ICH requirements.                                                          |
|               |                                                                                                                                                                                                 |
|               |                                                                                                                                                                                                 |
|               |                                                                                                                                                                                                 |
|               |                                                                                                                                                                                                 |
|               |                                                                                                                                                                                                 |
|               |                                                                                                                                                                                                 |
|               |                                                                                                                                                                                                 |
|               |                                                                                                                                                                                                 |
|               |                                                                                                                                                                                                 |
|               |                                                                                                                                                                                                 |
|               |                                                                                                                                                                                                 |
